DISCUSSION/RATIONALE:

Based on information contained in the Preliminary Assessment completed by the EPA (dated September 20, 1999) no significant threats appear to remain at the site. An Administrative Order on Consent (AOC) and final closure plan was agreed to by EPA and Pacific Activities Limited in June 1995. In summary the work at this site under the order consisted of grid sampling and excavation and/or capping of heavy metal contaminated soil. A May 22, 1997 letter from EPA to Pacific Activities Limited acknowledged completion of the Administrative Order on Consent. IDNR is providing oversight for the sampling for the monitoring wells which were installed on site. Sampling of these monitoring wells is covered under the closure plan. This site will be given an "N" qualifier representing the NFRAP designation (no further remedial action planned by EPA). If new information becomes available or site conditions change this site could be placed back on active status.
